

NETWORK HARDWARE PRODUCTS AND SERVICES

Information Leaflet for the SOA GITC Arrangement QPS73784

To capitalise on the new pace of innovation,
businesses need advanced networks with the
intelligence to connect data to ideas

Take advantage of the buying power of the Queensland Government and use carrier-class switches and routers that offer always-on reliability and high performance for branch, campus, and data centre.

By using the whole-of-government SOA GITC arrangement, approved customers can procure networking technologies and professional services from Juniper, Aruba, and Opengear—there are no volume breaks or minimum purchases regardless of value.

This arrangement provides access to Juniper's switching, routing, next-gen security, SDN & automation, Network Management, and Identity Policy Control suites, covers perpetual and subscription-based software and maintenance support packs from Juniper.

ABOUT THE SOA GITC ARRANGEMENT

SOA GITC Arrangement QPS73784 is managed by the Queensland Police Service (QPS) and is for the provision of Network Hardware Products and Services. The arrangement was established by the QPS in May 2016 and runs until May 2025.

QPS73784 is exclusive to CDM and available for use by the State of Queensland.

With an easy-to-understand pricing schedule every Queensland Government agency now has access to the best possible discount off list for Juniper, Aruba and Opengear products, services and maintenance care packs.

Professional services from CDM, Juniper, Aruba and Opengear are also available through the panel to help agencies with the design and implementation of their metro, regional and rural networks.

HOW TO USE THE SOA GITC ARRANGEMENT

Information about the arrangement including a copy of the Buyers Guide can be obtained by contacting the QPS Procurement Services via email:

QPS.ProcurementServices@police.qld.gov.au

Making purchases under QPS73784 is as simple as contacting CDM via:

- E-mail qld-info@cdm.com.au
- Phone (07) 3246 0000

CDM and the QPS can explain how to order Products and Services, including the establishment and use of GITC contract schedules, the expected minimum discounts, and additional services available including professional services rates and guidelines for its use.

CDM helps agencies build more than just a network with advanced Juniper Networks technologies engineered to solve the toughest challenges in networking.

SWITCHING Improve the economics of networking with carrier-class, high-density switches for branch, campus, and data centre.	EX SERIES ETHERNET SWITCHES These carrier-class switches are designed for the converged enterprise branch, campus, and data centre, and for service providers. They address growing enterprise demands for high availability, unified communications, and virtualisation.	QFX SERIES SWITCHES QFX Series switches satisfy the needs of today's most demanding enterprise and service provider environments. This high-performance, high-density platform is designed for top-of-rack, end-of-row, and spine-and-core aggregation deployments.
ROUTING A comprehensive, scalable, and secure portfolio of routers for enterprise and service provider networks.	MX SERIES 3D UNIVERSAL EDGE ROUTERS A portfolio of SDN-ready routing platforms that provide the industry-leading system capacity, density, and performance that enterprises, service providers, and cloud operators need to thrive in our always-on, hyper-connected digital world.	ACX SERIES UNIVERSAL ACCESS ROUTERS MEF CE 2.0-compliant hardened routers address use cases of business Ethernet services, residential aggregation, small cell, mobile backhaul, and industrial field area networks.
NEXT-GEN SECURITY High performance, scalable, and intelligent network security solutions for enterprises & service providers.	SRX SERIES FIREWALLS High-performance security with advanced, integrated threat intelligence, delivered on the industry's most scalable and resilient platform with 100GbE interfaces, the SRX features Express Path technology which enables up to 2 Tbps performance for the data centre.	SKY ATP & APPSECURE Sky Advanced Threat Prevention is a cloud-based service that provides advanced malware protection. AppSecure is a next-generation application security suite for the SRX Series Services Gateways that delivers threat visibility, protection, enforcement, and control.
SDN & AUTOMATION Future-proof for the cloud era with an open SDN solution that provides high performance, elasticity, and security.	NFX250 NETWORK SERVICES PLATFORM Secure and automated software-driven CPE devices provides custom service delivery on-premises and service chain multiple virtualised network functions.	CONTRAIL From network virtualisation and automation to turnkey integrated cloud management platform, Contrail delivers freedom of choice, intelligent automation and always-on reliability for cloud and NFV.
NETWORK MANAGEMENT Junos Space Network Management Platform delivers unified control of Juniper routing, switching and security devices.	JUNOS SPACE NETWORK MANAGEMENT PLATFORM A centralised network management and orchestration platform for managing network and firewall security devices and services through a single pane of glass with centralised, automated policy control.	NORTHSTAR CONTROLLER A powerful and flexible traffic engineering solution that enables granular visibility and control of IP/MPLS flows in carrier networks.

ABOUT CDM

CDM is an Australian-owned company providing the full spectrum of ICT services, from consulting to delivering and managing your ICT needs. We create lasting relationships focused on achieving your business outcomes, creating value and maximising your return on investment.
